

Interior and front door handles for DIN lockcases

Bearing:

Regardless of the type of rose, all handles have a nylon bearing between the rose and the neck of the handle. As the roses around the neck of the handle are not fixed to the neck, the handle is fixed to a special spindle with a retaining screw (except handles with 004-rose).

Packing:

Handles are normally delivered in D.I.Y packages.

Screws and door thickness

Roses are fixed with M4 or M5 X-head countersunk screws and threaded sleeves. More specific door thicknesses are in the table. If the door is thicker, thickness must be specified in the order.

DIN-HANDELS			
Handle	Rose	Door thickness	Special spindle
27	002	30-60	100
6, 133	002	30-60	100
110	010 002	30-60	100
		30-60	100

Stainless steel handles 3-18/015, 3-18s and 3-20/015 are delivered as standard for 35-60 mm thick doors. If the thickness of the door is other than standard, it must be specified in the order.

Spindles:

The handles are fitted with an 8 mm special spindle, which is made of galvanized steel. By special order we can deliver handles with a divided spindle; orders of this kind must always be agreed on in advance.

Roses:

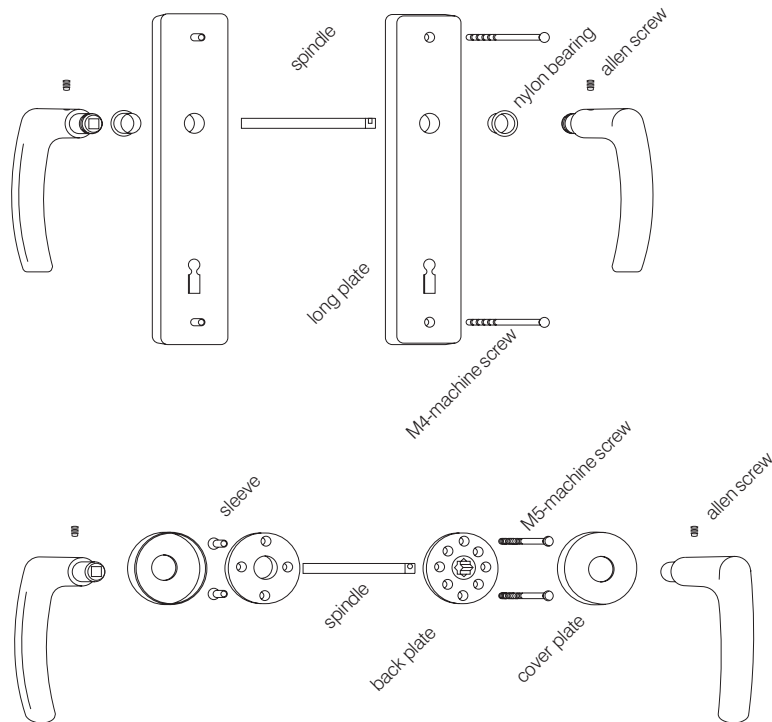

Depending on the use, there are two different roses suitable for the handles. The number of the

escutcheon is always the same as that of the rose, for example 019BB. The symbols representing the escutcheons can be seen in the margin.

015 has base plates of steel and the cover plates are made of stainless steel; screw heads are invisible. Only for use with stainless steel handles 3-18, 3-18s and 3-20.

010 is a massive longplate made of cast brass, available with standard key holes (PZ, BB and CH). Also available with turning-knob function for lavatory doors, or with a handle hole only (BL).

The 002-plate includes plastic under-plates and brass cover-plates that conceal screws. The thickness of the plate is 8 mm. Ordinary keyholes PZ and BB can be used in this plate. The plate is also available as a cover-plate P or with toilet doorknob facility.

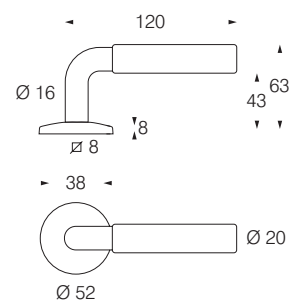

Parlament 2/002/950

Material: brass.

Surface finishes: chrome, satin chrome, polished.

For use with interior doors, including public premises.

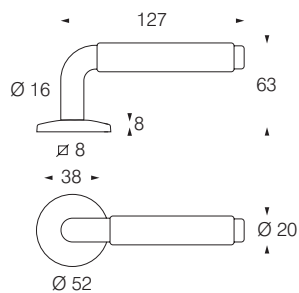

Parlament 22/002/950
